

Reduction in Action Case Study

Moonee Valley City Council “The Clocktower”

Result:

25% reduction in average monthly electricity use

Period:

2008 - 2009

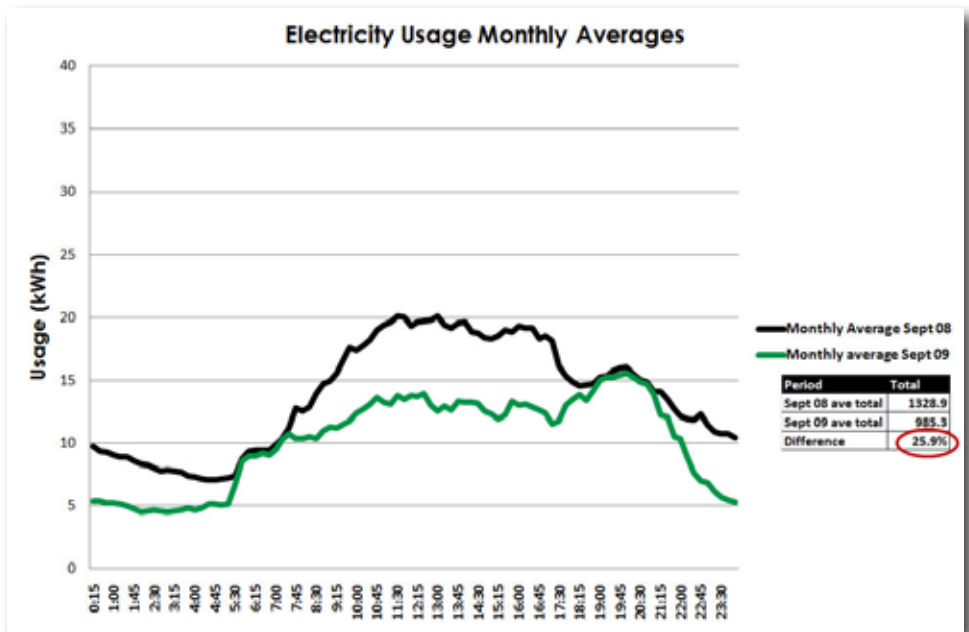

Evaluate

Energy Audits

Measure

Reduce

HVAC Optimisation
Energy Management Coaching

CarbonetiX worked with Moonee Valley City Council on their Clock Tower Centre facility to **reduce their electrical energy consumption by 25%**. The savings for gas usage have also been significant.

CarbonetiX undertook audits of six buildings in the precinct, one of which was the clock tower. The audit started the ball rolling, highlighting savings that could be made from HVAC optimisation and energy management coaching.

Sustainability officer Hugh Butcher says: “The Clock Tower staff - of their own accord - now have a full shut down program. This came from the knowledge and the whole concept of energy conservation outlined in the audit. **The audit really hit the message home, as well as specific actions.**”

“As you can see we are making some big cuts to our emissions, and I truly believe that it’s a result of the relationship that has been established between council and CarbonetiX.”

High Butcher, Sustainability Officer, Moonee Valley City Council

“It’s all very positive, and CarbonetiX have always been willing to discuss our questions about it.”
